

Pay-per-call Australian data for AI agents.

Milypay exposes Australian APIs over the x402 protocol. Agents request data, receive HTTP 402 with a price in AUD stablecoins, pay once, and get JSON back in the same round-trip. No accounts. No API keys. Settlement on Solana via PayAI.

- 1 Request
GET any endpoint
- 2 402 challenge
Price · asset · pay-to
- 3 Wallet pays
AUDD / USDC on Solana
- 4 Data returns
Same round-trip

WAYS TO INTEGRATE

- CLI** npx milypay nem · abn · transit · cpi
- MCP** npx milypay mcp → Claude / Cursor
- SDK** milypay-sdk — auto-pay on 402
- HTTP** Raw x402 · api.milypay.xyz

SETTLEMENT

- Network: Solana (PayAI facilitator)
- AUD-native: AUDD · AUDM · dAUD
- Also accepted: USDC · USDT
- Demo host free/throttled · API paid
- Receipts: sol.new/receipt/<sig>
- Namespace: milysec/* on Pay.sh
